## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 and 15-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Sinderby et al. (WO 99/62580).

The Sinderby et al. reference discloses a apparatus for controlling positive pressure assist to a patient during expiration comprising a detector of a level of electrical activity of a patients respiration related muscle (see Figure 2) and a controller that includes a neuro-ventilatory efficiency computation device 601 to control the operation of a level of pressure assist by unit 604. Furthermore, the Sinderby et al. reference discloses a control arrangement 700 in Figure 11 to detect preset levels of EMG intensity to control the automatic operation of PEEP ventilation.

Also, attention is directed to page 7, lines 22-26 where it is further stated that the Sinderby et al. device is applicable with <u>any</u> respiratory muscle signal (i.e. that includes at least inspiration and expiration). Essentially, Sinderby et al. includes all the components necessary and is capable of measuring a level of electrical activity of a patient's diaphragm during expiration and controlling a level of pressure assist during such expiration event.

In regard to claims 1-8 and 15, the method as claimed would be inherent during normal use and operation of the device if utilized to measure a level of electrical activity of a patients

Application/Control Number: 10/808,722

Art Unit: 3771

diaphragm during expiration and control a level of pressure assist during such expiration event, discussed above.

## Response to Arguments

Applicant's arguments filed 8-3-07 have been fully considered but they are not persuasive. In regard to Applicant's argument that the Sinderby et al. reference fails to explicitly disclose the sensing of electrical activity during expiration, Examiner agrees at least in part.

Although the Sinderby et al. reference may not disclose sensing electrical activity during expiration, attention is directed above where Examiner has taken the position that the Sinderby et al. is most certainly capable of sensing such activity and controlling the level of pressure as claimed, especially since all of the required components to achieve such function are disclosed by Sinderby et al.

## Conclusion

Claims 9-14 and 24-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3771

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Steven O. Douglas/ whose telephone number is (571) 272-4885. The examiner can normally be reached on Mon-Thurs 6:30-5:00.

The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
